

Nexora Commerce

Retail Sales, Customer & Profitability Analytics

Power BI Dashboard Report

Tools: Microsoft Excel, Power Query, Microsoft Power BI, DAX

Analysis Period: January 2024 – December 2025

Dashboard Pages: 3

1. Dashboard Overview

The Nexora Commerce Power BI dashboard provides an interactive view of retail sales, profitability, product performance, customer performance, discount levels, regional performance, and sales channels.

The dashboard is designed to help management move from high-level performance monitoring to detailed product and customer analysis.

The dashboard consists of three pages:

1. Executive Overview
2. Product & Profitability
3. Customer Analysis

The dashboard uses a consistent visual design with KPI cards, tables, charts, and analytical insights to communicate the main business findings clearly.

2. Dashboard Objectives

The dashboard was developed to help management:

- Monitor overall sales and profitability.
- Track sales and profit trends over time.
- Compare regional and channel performance.
- Identify loss-making product categories and subcategories.
- Understand the relationship between discount levels and profit margins.

- Identify high-sales, loss-making products.
 - Analyze customer segment performance.
 - Identify top customers by sales.
 - Compare customer sales with profitability.
 - Support profitability-focused business decisions.
-

3. Dashboard Structure

The dashboard contains three analytical pages.

Page	Purpose
Page 1	Executive Overview
Page 2	Product & Profitability
Page 3	Customer Analysis

A consistent header is used across all pages, including:

- Nexora Commerce branding
- Page navigation
- Analysis period
- Page number
- Page title

The analysis period displayed across the dashboard is **Jan 2024 – Dec 2025**.

4. Page 1 — Executive Overview

4.1 Purpose

The Executive Overview provides a management-level summary of the company's sales, profitability, customer and order activity.

It is designed to answer the question:

“What is the overall business performance, and where are the main profitability concerns?”

Figure 1. Nexora Commerce — Executive Overview Dashboard

4.2 KPI Cards

The page contains eight key performance indicators.

KPI	Value
Total Sales	₹203.15M
Total Orders	20K
Total Customers	4K
Total Quantity Sold	10K
Total Cost	₹217.08M
Total Profit	-₹13.94M
Average Order Value	₹10K
Profit Margin	-6.86%

The KPI cards provide an immediate view of the company's overall performance.

The negative Total Profit and Profit Margin values are highlighted to make the profitability issue immediately visible.

5. Sales Trend Over Time

The Sales Trend Over Time visual shows monthly sales performance from January 2024 to December 2025.

The line chart allows management to observe changes in sales across the analysis period.

Sales fluctuate from month to month, with several higher-sales periods and lower-sales periods rather than a consistently increasing pattern.

The visual is useful for monitoring changes in revenue performance over time.

6. Profit Trend Over Time

The Profit Trend Over Time visual tracks monthly profit across the same analysis period.

The trend remains below zero throughout the displayed period, indicating persistent negative profitability.

The visual demonstrates that the profitability issue is not limited to a single month but occurs across the analysis period.

7. Sales by Region

The Sales by Region chart compares sales across the four regions.

The displayed sales values are approximately:

Region	Sales
South	₹73M
West	₹54M
North	₹45M
East	₹31M

South contributes the highest sales, followed by West, North and East.

The regional analysis should therefore consider profitability alongside sales because higher sales do not necessarily indicate better financial performance.

8. Sales by Channel

The Sales by Channel chart compares Online and Store sales.

Channel	Sales
Online	₹133M
Store	₹71M

Online contributes substantially more sales than the Store channel.

However, both channels have similar negative profitability levels, indicating that higher sales through Online do not automatically translate into stronger margins.

9. Key Business Takeaways — Executive Overview

The dashboard highlights four major points:

1. Overall profitability remains negative

₹203.15M in sales generated a ₹13.94M loss, resulting in a -6.86% profit margin.

2. Higher discounts are associated with weaker margins

Profit margin declines from approximately -2.2% at a 15% discount to -54.8% at a 50% discount.

3. All regions are loss-making

South records the highest sales but also records the largest absolute loss.

4. Online drives higher sales

Online contributes approximately ₹133M compared with ₹71M from Store, while both channels have similar negative margins.

10. Page 2 — Product & Profitability

10.1 Purpose

The Product & Profitability page provides a detailed analysis of product categories, subcategories, discounts, and loss-making products.

It is designed to answer:

“Which products and discount levels are contributing to profitability problems?”

Figure 2. Nexora Commerce — Product & Profitability Dashboard

11. Category & Subcategory Performance

The Category & Subcategory Performance matrix compares:

- Total Sales
- Total Cost
- Total Profit
- Profit Margin %

across product categories and subcategories.

The major categories shown are:

- Sports & Fitness
- Home & Kitchen
- Fashion
- Electronics
- Beauty & Personal Care

All major categories shown in the matrix have negative Total Profit and negative Profit Margin.

The category-level results shown on the dashboard are approximately:

Category	Sales	Cost	Profit	Margin
Sports & Fitness	₹48.9M	₹52.3M	-₹3.4M	-7.0%
Home & Kitchen	₹48.7M	₹52.0M	-₹3.3M	-6.8%
Fashion	₹19.9M	₹21.2M	-₹1.4M	-7.0%
Electronics	₹38.3M	₹41.0M	-₹2.7M	-7.0%
Beauty & Personal Care	₹47.4M	₹50.5M	-₹3.1M	-6.6%

The matrix can be expanded to investigate individual subcategories.

12. Profit Margin by Discount Level

The Profit Margin by Discount Level line chart shows how profit margin changes across discount levels.

The observed margins are:

Discount	Profit Margin
15%	-2.2%
20%	-5.3%
25%	-7.9%
30%	-13.6%
50%	-54.8%

The chart shows increasingly negative margins as the discount level increases.

This indicates a strong association between higher discount levels and weaker profitability.

However, the chart alone does not prove that discounting is the only cause of the losses

13. Top Loss-Making Products

The Top Loss-Making Products table identifies products with negative profitability.

The table displays:

- Product Name
- Total Sales
- Total Cost
- Total Profit
- Profit Margin %

Examples visible in the dashboard include:

- Accessories Product 002
- Accessories Product 006
- Personal Care Product 106
- Personal Care Product 108
- Furniture Product 103
- Cookware Product 063

The visual allows management to identify products that require further investigation based on their sales, costs and losses.

14. Profitability by Subcategory

The Profitability by Subcategory chart compares Total Profit across subcategories.

The displayed subcategories include:

- Accessories
- Fitness Equipment
- Cookware
- Personal Care
- Haircare
- Furniture

All displayed subcategories have negative profitability.

Accessories shows the largest loss among the visible subcategories, followed by Fitness Equipment and Cookware.

This visual helps identify subcategories that may require deeper cost, pricing or discount analysis.

15. High-Sales / Loss-Making Products

The High-Sales / Loss-Making Products scatter chart compares:

- **X-axis:** Total Sales
- **Y-axis:** Total Profit

The chart contains individual product-level observations.

The visual demonstrates that products with higher sales can still have negative profit.

This is important because it shows that increasing sales volume alone does not necessarily improve the company's financial performance.

Management should therefore evaluate product profitability together with sales.

16. Page 3 — Customer Analysis

16.1 Purpose

The Customer Analysis page examines customer segments, top customers by sales, and the relationship between customer sales and profitability.

It is designed to answer:

“Which customers generate revenue, and does that revenue translate into profitability?”

Figure 3. Nexora Commerce — Customer Analysis Dashboard

17. Customer Segment Performance

The Customer Segment Performance matrix compares:

- Total Sales
- Total Orders
- Total Profit
- Profit Margin %

across customer segments.

The dashboard includes:

- Consumer
- Corporate
- Small Business
- Unknown

The displayed results are:

Customer Segment	Sales	Orders	Profit	Margin
Consumer	₹140.31M	13,931	-₹9.6M	-6.86%
Corporate	₹38.01M	3,610	-₹2.7M	-6.99%
Small Business	₹23.85M	2,372	-₹1.6M	-6.58%
Unknown	₹0.98M	87	-₹0.1M	-8.49%
Total	₹203.15M	20,000	-₹13.9M	-6.86%

Consumer customers generate the majority of sales, but profitability remains negative.

The Unknown segment is retained because the original data contained missing customer segment information that was handled during data cleaning.

18. Top 10 Customers by Sales

The Top 10 Customers by Sales chart identifies customers contributing the highest sales.

The chart ranks customers based on Total Sales.

Examples of high-sales customers visible in the dashboard include:

- Customer 0677
- Customer 2406
- Customer 2397
- Customer 0936
- Customer 0064
- Customer 1433
- Customer 2780
- Customer 3937

The visual helps management identify high-value customers from a revenue perspective.

However, sales ranking should be considered together with profitability because high sales do not necessarily mean high profit.

19. Customer Sales vs Profitability

The Customer Sales vs Profitability scatter chart compares individual customer performance.

- **X-axis:** Total Sales
- **Y-axis:** Total Profit

The majority of observations appear below zero on the profit axis.

This indicates that many customers generate sales while remaining associated with negative profitability.

The scatter plot therefore reinforces the importance of evaluating customer profitability rather than using sales alone to identify valuable customers.

20. Customer Insights

The dashboard highlights three main customer insights:

Consumer customers drive most sales, but profitability remains negative.

The Consumer segment contributes the largest share of total sales but still records negative profitability.

High sales do not necessarily translate into profitable customers.

The customer-level scatter plot shows that higher sales can still be associated with negative profit.

Customer profitability remains negative, making margin as important as revenue.

Customer evaluation should therefore consider both revenue and profitability.

21. Dashboard Design

The dashboard uses a consistent visual design across all three pages.

Main design elements

- Dark navy header
- Nexora Commerce branding
- Light dashboard background
- White visual containers
- Teal for sales-related visuals
- Red for negative profitability
- Consistent typography
- Rounded visual containers
- Clear page navigation
- Period indicator
- Consistent KPI formatting

The visual design separates positive business metrics from negative profitability indicators while maintaining a consistent color palette.

22. Dashboard Navigation

The dashboard contains three navigation buttons:

- Executive Overview
- Product & Profitability
- Customer Analysis

The active page is visually highlighted.

This allows users to move between management-level analysis and detailed product/customer analysis without leaving the dashboard.

23. Analytical Approach

The dashboard follows a business-focused analytical structure:

Executive Performance → Product Profitability → Customer Profitability

The first page provides the overall business picture.

The second page investigates products, categories, subcategories and discounts.

The third page investigates customers and customer profitability.

This structure allows users to move from high-level performance to potential drivers of the profitability problem.

24. Key Dashboard Findings

The dashboard highlights the following major findings:

1. Nexora generates ₹203.15M in sales but records a ₹13.94M loss.
 2. Overall profit margin is -6.86%.
 3. Profit remains negative throughout the displayed analysis period.
 4. All major product categories shown are loss-making.
 5. Higher discount levels are associated with increasingly negative profit margins.
 6. High-sales products can still generate significant losses.
 7. South generates the highest regional sales but also has the largest absolute loss.
 8. Online generates substantially higher sales than Store.
 9. Consumer customers generate the majority of sales but remain loss-making.
 10. High customer sales do not necessarily translate into positive profitability.
-

25. Dashboard Outcome

The Nexora Commerce dashboard provides a consolidated view of sales and profitability performance across products, customers, regions, channels and discount levels.

Rather than focusing only on revenue, the dashboard emphasizes profitability alongside sales.

The analysis helps identify:

- Loss-making product areas
- High-sales loss-making products
- Discount levels associated with weaker margins
- Loss-making regions
- Customer segments with negative profitability
- High-sales customers requiring profitability evaluation
- Differences between Online and Store performance

The dashboard can therefore serve as a management monitoring tool for identifying areas that require further investigation and corrective action.

26. Tools & Technologies

Microsoft Excel

Used for initial data handling and dataset preparation.

Power Query

Used for:

- Data cleaning
- Missing value handling
- Duplicate removal
- Text standardization
- Data type validation
- Transformation

Microsoft Power BI

Used for:

- Data modelling
- Dashboard development
- Interactive visualizations
- KPI presentation
- Business analysis

DAX

Used to create measures for:

- Total Sales
- Total Cost
- Total Profit
- Profit Margin %
- Total Order
- Total Customers
- Total Quantity
- Average Order Value

27. Conclusion

The Nexora Commerce Power BI dashboard demonstrates an end-to-end approach to business-focused data analytics.

The dashboard combines KPI monitoring, trend analysis, product profitability analysis, discount analysis, regional analysis, channel analysis and customer profitability analysis into a single reporting solution.

The key business message from the dashboard is:

High sales do not necessarily mean high profitability.

Therefore, management should evaluate revenue together with costs, discounts, margins and profitability when making business decisions.

Project

Nexora Commerce — Retail Sales, Customer & Profitability Analytics

Tools: Excel | Power Query | Power BI | DAX

Dashboard Pages: 3

Analysis Period: January 2024 – December 2025
